

IMPROVING SYSTEM PROMPT FOR NJ AI ASSISTANT

New Jersey Innovation Authority | Product Management

Stephen Tsai, Product Management Fellow | *The New School, Liberal Studies (Data and Policy)*

Keywords:

product strategy, ethical AI, prompt engineering, common use and adversarial testing, usability testing

Summary:

This project for **NJ AI Assistant** (the workplace tool for NJ state employees) was to **improve on the system prompt** (the underlying set of instructions that every Large Language Model [LLM] receives that define its role and behaviors). We addressed issues that all LLMs struggle with, like **accuracy and transparency, tone and helpfulness, and safe and responsible use**. The main methods we used were **prompt engineering** iterations, developing **evaluation criteria, common use and adversarial testing**, and **usability testing with users**. We hope that this will **help NJ state employees work as effectively as possible for NJ residents**.
